DETAILED ACTION

Applicant's election with traverse of Group I species of sodium aluminofluorides, sucrose, nitrogen, zinc, folic acid and lignosulfate-----

in the reply filed on 1/23/06 is acknowledged. The traversal is on the ground(s) that It would not be burdensome to search the other inventions----. This is not found persuasive because ---

For reasons of record, examiner finds it burdensome to extend the searches and examination.

The requirement is still deemed proper and is therefore made FINAL.

Claims 21-37 stand withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected inventions , there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on 1/23/06.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 4,20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

. Abbreviation should be spelled out (EDD, EDTA).

We find no support for lignosulfate; only sulfonates.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 1615

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-20 are rejected under 35 U.S.C. 102(b) as being anticipated Yamashita 633672.

See claims 10-15-the instant formulation, absent pesticide, at instant concentrations, except for trace minerals. However, these are disclosed at example 1-0.02% boron, while pesticides are at example 4. Also, a number of the required macro/micro nutrients are pesticidal- sulfur, zinc, boron, iron, copper, citric acid, for example, as antifungal, antimicrobial, molluscicidal actives.

Claim 1-9, 11, 12, 18 rejected under 35 U.S.C. 102(b) as being anticipated by Amburn: 3161497.

The instant claim 4 inorganic-potassium cyanate is shown with carbon skeleton energy components of corn gluten (col 3, top; col 4, line 56; col 5, line 40) at instant concentration (col 6). Binders provide phytotoxicity reduction (col 5, lines 40-50). Although sucrose is not specified, some would inherently be present in the corn processing, as would the amino acids as components of the gluten. Macro and micro nutrients, and complexing agents-urea, (col 6, bottom) also a macronutrient, and fertilizers-macro and micro nutrients (col 4, lines 56-60).

Claim 1-6, 8, 9, 11, 12, 14, 18-20 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Klepping 3789122.

See example 29, 31, 34 actives can be 1-90% (col 29, lines 33-35). Phytotoxicity reduction is achieved with complexes (col 1, lines 22-26; col 2) including zinc, manganese (example 29) and sodium ligninsulfonates are used (col 27, lines 15-18, example 27, 28). Fertilizers are included-calcium, manganese, (col 29, lines 22-28).

Claim 1-6, 8, 9, 11, 18-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Wommack 4018926.

Sucrose (col 18, lines 47-48) with instant pesticides (col 21-23) are taught, as are feeds-corn-sucrose sources, with only 0.01-0.25% pesticides (col 17, top). Fertilizers-the instant macro/micro nutrients, are included (col 21, lines 20-25), as is sodium ligninsulfonate at 1% (example 12) and calcium (example 18).
